

# Frimley and Ascot Locomotive Club

## Frimley Lodge Miniature Railway Information

There are two tracks. One track is multi gauge, ground level and caters for 3½, 5 and 7¼ inch gauge and is used to give rides to the public as well as for club members' use. The main circuit is approximately 1 km long. The minimum radius is 50ft and inclines are a maximum of 1:80 up and 1:56 down.

The second track, completed in 2012, is elevated and comprises 2 ½, 3 ½ and 5 inch gauge. The length is about 200m and, due to tight radii, is suitable only for short wheelbase locomotives. Minimum ground clearance is 13 inches and maximum is 45 inches. This is to avoid excessive inclines.

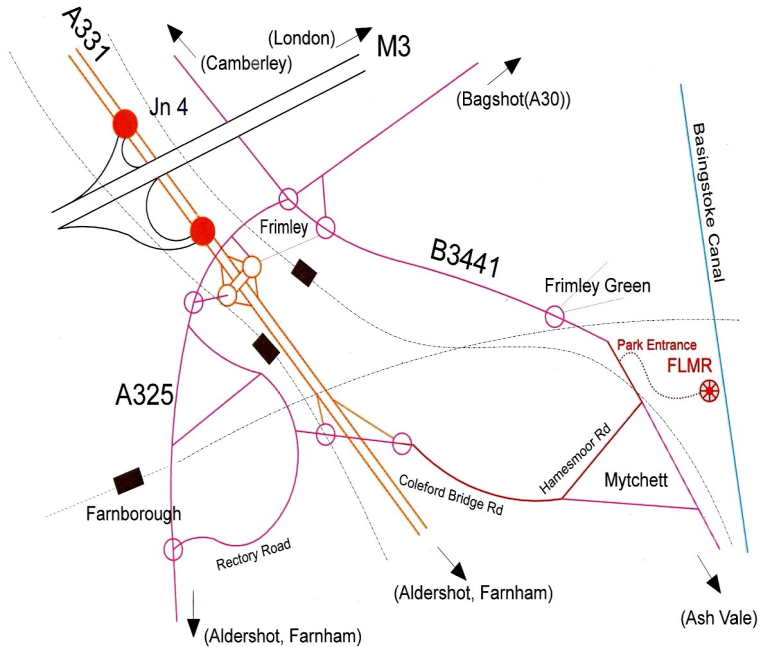

For visitors' events lasting two days or more, arrangements can be made for campers and caravans to park overnight (camping by the public is not generally permitted). The Park gates are closed at sunset and there is a 2 m height barrier at the entrance. (Please phone or e-mail in advance if this is a problem.) There is a members' only toilet in the carriage shed and facilities to provide light refreshments. Coal and mains water are available with 12v power and compressed air provided for steam raising. Our members' boilers are certified in compliance with procedures set out by the Southern Federation of Model Engineering Societies and, before raising steam, owners of visiting locomotives must produce a valid boiler test certificate from their own club. Wheel sets to standards set by Martin Evans and Tubal Cain are acceptable. In addition, all rolling stock and riding trucks will be checked.

Carriages are available for the ground level track, all of which are fitted with automatic vacuum brakes. There are a few driving cars available but visitors are encouraged to bring their own. Locomotives intending to haul public passenger trains are required to use vacuum braked stock and, if a locomotive is not vacuum fitted, a battery powered vacuum generator and brake valve can be provided. The Railway is fully signalled and the system is mostly automatic. All visiting drivers will be given guidance for safe running and instruction on the signalling system.

*See over for contact details.*
